PROFESSIONAL SUMMARY

4+ years of experience in designing, building, and optimizing scalable solutions using SQL, Python, and cloud technologies. Proficient in leveraging AWS services (S3, EC2, Lambda) for efficient data processing. Skilled in building scalable APIs and adept at implementing machine learning models, optimizing workflows, and collaborating with cross-functional teams to deliver impactful solutions.

SKILLS

Programming Languages:	Python, Java, SQL, C++, Go, JavaScript, Bash/Shell Scripting
Frameworks:	Spring Boot, Flask/Django, Node.js
Cloud Services:	AWS S3, Lambda, EC2, CloudWatch, CloudFormation, Docker, Kubernetes
Database Management:	PostgreSQL, MySQL, Aurora, DynamoDB, SQL Server
Big Data Tools:	Snowflake, Apache Spark, Amazon Redshift, Tableau, Power BI
Development Tools:	ETL, Git, Jenkins, JIRA, AWS CodePipeline, Linux/Unix
Methodologies:	Agile, CI/CD, DevOps, Data Governance

CERTIFICATION

2024 (AWS04456520) **AWS Certified Developer – Associate**

EDUCATION

New England College Master of Science in Computer Information Systems Relevant Coursework: Java, Data Analytics, Cloud Computing, Database Systems, Python, Data Science.	Henniker, New Hampshire, USA September 2022 - July 2024
Vidya Jyothi Institute of Technology Bachelor of Technology in Electronics and Communication Engineering Relevant Coursework: Software Engineering, Java, R, Algorithms, Network Communications, SQL.	Hyderabad, India July 2015 - June 2019

EXPERIENCE

University of Massachusetts Computer Science Lab Operator : Linux/Unix Systems, Python, SQL, JIRA	Boston, United States September 2022 – May 2023
- Executed backend operations for over 1,000 users, reducing incident resolution time by 35% by optimizing the Linux / Unix process and conducting over 50 code reviews. - Designed and implemented database solutions and stored procedures to streamline operations by 30% and ensure 99% data integrity. - Created Python and SQL-based data manipulation scripts to streamline support operations, improving data driven processes by 20%. - Engaged in agile cycles, contributing to a 20% improvement in end user experience by supporting technical troubleshooting. - Employed JIRA, ServiceNow to manage 100+ tasks and incidents, ensuring timely resolution, and improving workflow efficiency by 25%.	
Regalix-Google Senior Account Strategist : Google Ads, Analytics, Jenkins, CI/CD, SQL, GIT, AWS	Hyderabad, India January 2020 – August 2022
- Enhanced codebase maintainability by 10% and drove a 60% traffic increase within three months by developing backend solutions with Java and Spring, managed code via GitHub, and developed comprehensive advertising strategies using Google Ads and Analytics. - Directed high volume data ingestion and processing pipelines across 300+ client accounts, utilizing SQL for efficient querying, Python for automation scripts, AWS for scalable distribution. Enhanced processing speed, simplified workflows, and increased data precision. - Conducted end-to-end testing and deployment of complex ad campaigns, employing AWS for seamless integration and scaling Code-Pipeline and Jenkins to optimize CI/CD workflows resulting in a 200% increase in processing speed. - Refined database tasks using Jenkins, achieving a 99% pass rate for production code, reducing rollout issues by 25%, and significantly advancing system reliability and developer efficiency. - Crafted and improved SQL queries, enhancing database efficiency and cutting processing time by 40%, increasing client response rates.	

PROJECTS

Cloud Based Financial Tracking Platform: Angular, Java, Spring, JSON, REST APIs, JIRA
- Led the back end development using Java and Spring Boot to create RESTful APIs, enabling seamless real time data exchange across distributed systems. Streamlined documentation processes in JIRA, improving project tracking and cross-team collaboration. - Integrated SQL queries to extract, transform, and load data from large datasets, processing over 1TB of data for analysis. - Engineered a suite of optimized regression tests with JUnit, achieving a 20% improvement in code reliability, cutting down bugs by 15%. - Built comprehensive data visualizations in Tableau and Power BI to monitor financial KPIs, raising stakeholders decision making by 20%. - Configured Jenkins CI/CD pipelines for automated build and execution, reducing integration time by 30%.
E-Commerce Backend System: Python, Flask, PostgreSQL, AWS Lambda, DynamoDB, Docker
- Designed and deployed a scalable backend for an e-commerce platform, handling over 10,000 concurrent users with zero downtime. - Upgraded database performance by 35% through indexing and tuning in PostgreSQL, using AWS CloudWatch improving query response. - Conducted user acceptance testing (UAT) and documented workflows to streamline future integrations reducing costs by 20%.
